

GLASS + SAFETY

MAXIMUM BALLISTIC PROTECTION AT LOWEST WEIGHT

Panoramic Periscopes from GuS

With a standard dimension of up to 1m our panoramic periscopes can replace a STANAG level 4 glass panel.

As a periscope it offers more protection at 90% less weight than a conventional screen.

The periscopes are designed to allow the driver and e. g. the commander to see through one screen.

With the fold-away version of the periscope both users can optimize their field of view by using the individual flap mirrors.

If you require a sample or more information contact us at info@gus-germany.com.

KEY FEATURES

- the standard is available with a dimension up to 1000 mm (39,4 in.); customized versions available
- 90% less weight than a conventional screen
