

WORLD'S FIRST SAND-RESISTANT PERISCOPE

Only a Diamond is More Resistant to Sand Abrasion

GuS' newest innovation of periscopes dramatically improves sand abrasion resistance particularly in desert environments and other theatres of operation. Our periscopes keep a clear view even under the toughest conditions, because they have an additional protective outer layer of transparent ceramic. When tested against sand abrasion in accordance with MIL-STD-810G 510.5, proc. II, the ceramic protects your clear view nearly 100%.

If you require a sample or more information contact us at info@gus-germany.com.

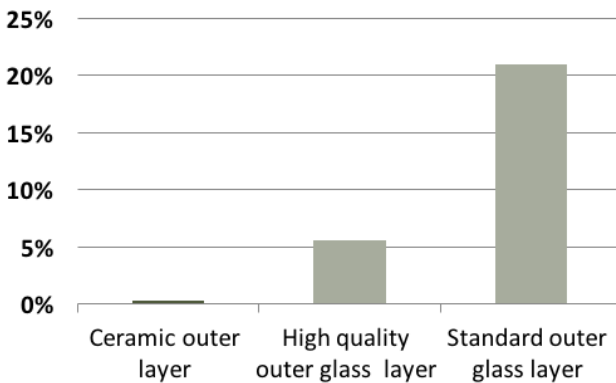

KEY FEATURES

- All our periscopes like M17, M27 and others are available with this upgrade
- No significant loss of light transmission
- No increase in haze
- Better rock strike resistance
- IR compatible
- Only available at GuS
