GLASS + SAFETY

INNOVATION.QUALITY.RELIABILITY.

YOUR PARTNER.WORLDWIDE.

PROTECTING HUMAN LIVES FOR OVER 40 YEARS.

If protecting human lives matters to you as much as it does to us, only one quality standard can ever be good enough: 100 %, without compromise. GuS products have had the trust of customers around the world for over 40 years and are used by more than 40 national security organisations to ensure the safety of their armed forces. Our expertise in selecting, processing and combining materials makes us the preferred supplier for many international Original Equipment Manufacturers (OEMs) as well.

Since 1977, GuS Glass+Safety has specialised in transparent armour. As a leader in the development and production of bullet-resistant glass and tank periscopes, our brand is well known for its quality. We are proudly made in Germany; our heritage is rooted in excellence and meticulous attention to detail.

We are a second-generation family-owned company that upholds a strong legacy of traditional values alongside a future-fit spirit of innovation. Our highly qualified, motivated employees are our greatest asset. Their personal dedication is reflected in everything we do and all areas of our modern, certified working processes.

GuS Glass+Safety takes responsibility. Without compromises. For the best possible protection. For a safe, sustainable future.

In response to the Corona Virus pandemic, we have made a commitment to further support the societies we serve. We are helping make everyday life safer with our knowledge, experience and expertise by offering protective face shields and dividers as personal protection equipment, under the brand name Personal Shield.

THE GUS EXPERTISE. FAR MORE THAN JUST PRODUCTS.

At our headquarters in Lübbecke, in the north-west German region of Westphalia, 150 employees develop and produce our high-quality products. 9,000 m² host our vertically integrated facility as a one-stop shop for bullet-resistant glass and periscopes. GuS has a wide portfolio of over 400 off-the-shelf standard periscopes available and we also produce components such as heating foil, laser filters, and mirrors. Our in-house CNC and glass machining centres enable us to meet short delivery times.

Our core competencies include the autoclave-based lamination of optical materials, such as glass and plastics. GuS laminated safety glass is not just used in wheeled and tracked military vehicles, but also in forestry vehicles, construction vehicles, armoured security vehicles and machine housings. In addition to -off-the-shelf standard solutions, we offer vehicle-specific bespoke safety concepts.

Our glazing can withstand extreme weather conditions and stresses and our ongoing research and development (e.g. on weight reduction and life cycle extension) ensures we meet an increasing demand of customer needs and tough environments. Our commitment to innovation is brought to life in our own research and development department, as well as many research collaborations with renowned institutes such as the Fraunhofer Institutes. As a technology leader, we are an ideal trusted partner for your research projects.

At GuS we are also experts at maintenance and service: Our certified repair service for bullet-resistant windscreens is an affordable and sustainable alternative to buying new ones.

QUALITY – MADE IN GERMANY.

WE PAY CLOSE ATTENTION TO YOUR NEEDS.

At GuS, everything is designed to meet all of your requirements – be it with standard solutions or with a customised safety concept. You can get all services from a single source, from design to production to maintenance of your transparent armour. You can get your GuS products as complete pre-assembled components, which can be integrated directly into your vehicle, or as a collection of modules, depending on your personal requirements. A flexible degree of vertical integration allows us to meet various needs, for example, we can produce small lot numbers quickly. In case of any special requirements for your safety glass or periscopes, our engineers will provide you with customised solutions and on-site support.

We are your partner for design, development, prototyping and serial production of transparent armoured protection. Our products are tested according to TL, MIL AQAP, DIN ISO, AECTP and other comparable international standards. We are able to perform new or modified tests according to your specific requirements, ensuring the level of safety you need.

We also offer GuS inspection training courses. These are especially designed for vehicle maintenance officials, upskilling them so they are able to inspect and classify damages to bullet-resistant glass.

Flexibility is yet another feature of GuS's high-performance company culture. As a medium-sized company, we keep our processes highly agile. This ensures efficient decision-making and quick project completion, from quotation to implementation.

We are your trusted experts for transparent armour. We are driven by customer satisfaction and will only be satisfied when your needs are met. Please do not hesitate to contact us for any questions or further information. We look forward to hearing from you!
